Henrik Håkansson

Ken Goldberg & Joseph Santarromana: TeleGarden

Roy Ascott: Moist media

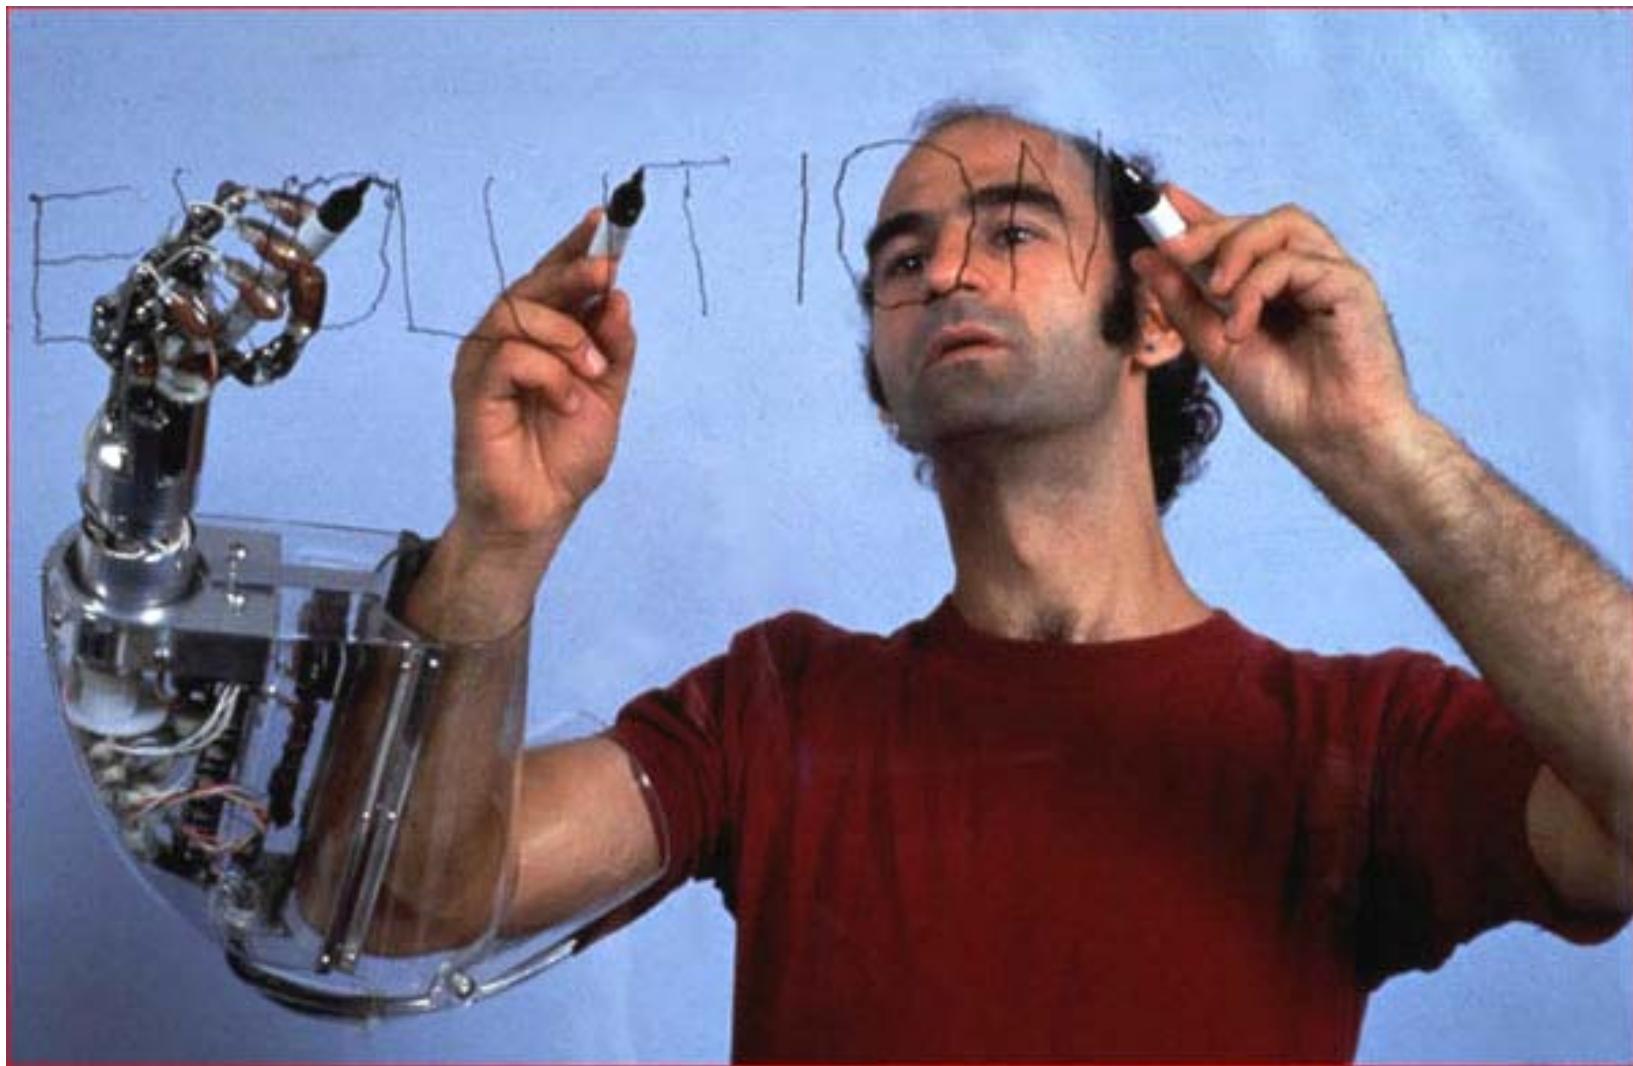

We are simultaneously present in many realities: physical presence in ecospace, apparitional presence in spiritual space, telepresence in cyberspace, and vibrational presence in nanospace.

... The new art media is immaterial and moist, numinous and grounded, while the technoeitic mind both inhabits the body and is distributed across time and space. Art and reality are becoming syncretic as these contradictions are reconciled, and differences melded.

Tomas Thøftner: Danmark er et godt nytår ("Alting A")

Nytårstale (I)

Vi ville. Fordi vi ville. Fordi vi vil. Fordi vi holdt fast. Og det gælder ikke mindst i Europa. Derfor skal vi videre. Lad os ikke glemme, ikke for at huske, men fordi dagen starter med et sundt og billigt måltid mad. Vi er blevet bredere, og vi har også oplevet en stor sorg, velfærd, afdrag på gælden og den enkelte families behov. Det er ikke længere nogens ansvar. Det er ikke sket af sig selv. Og får vi først standset den meningsløse vold, er vi som nation begyndt at se tilbage, ikke blot på året der gik, men som aktiv medspiller, med egen mening og egen indsats. Vi er som blade i et familiealbum. På billede efter billede optræder familiens medlemmer, dens venner og bekendte, til hverdag og fest, ved arbejdet og på ferie. Vi står midt i en forankring. Alligevel forstår jeg godt, hvis vi søgte tilflugt for stiltfærdigt og ubemærket at samle os. De fleste af os sover nu og da, og vi har privatiseret vores sundhedspoliti. December følges op med venner og langt mere sensationsprægede dommedagsprofetier, men først

AI & AL

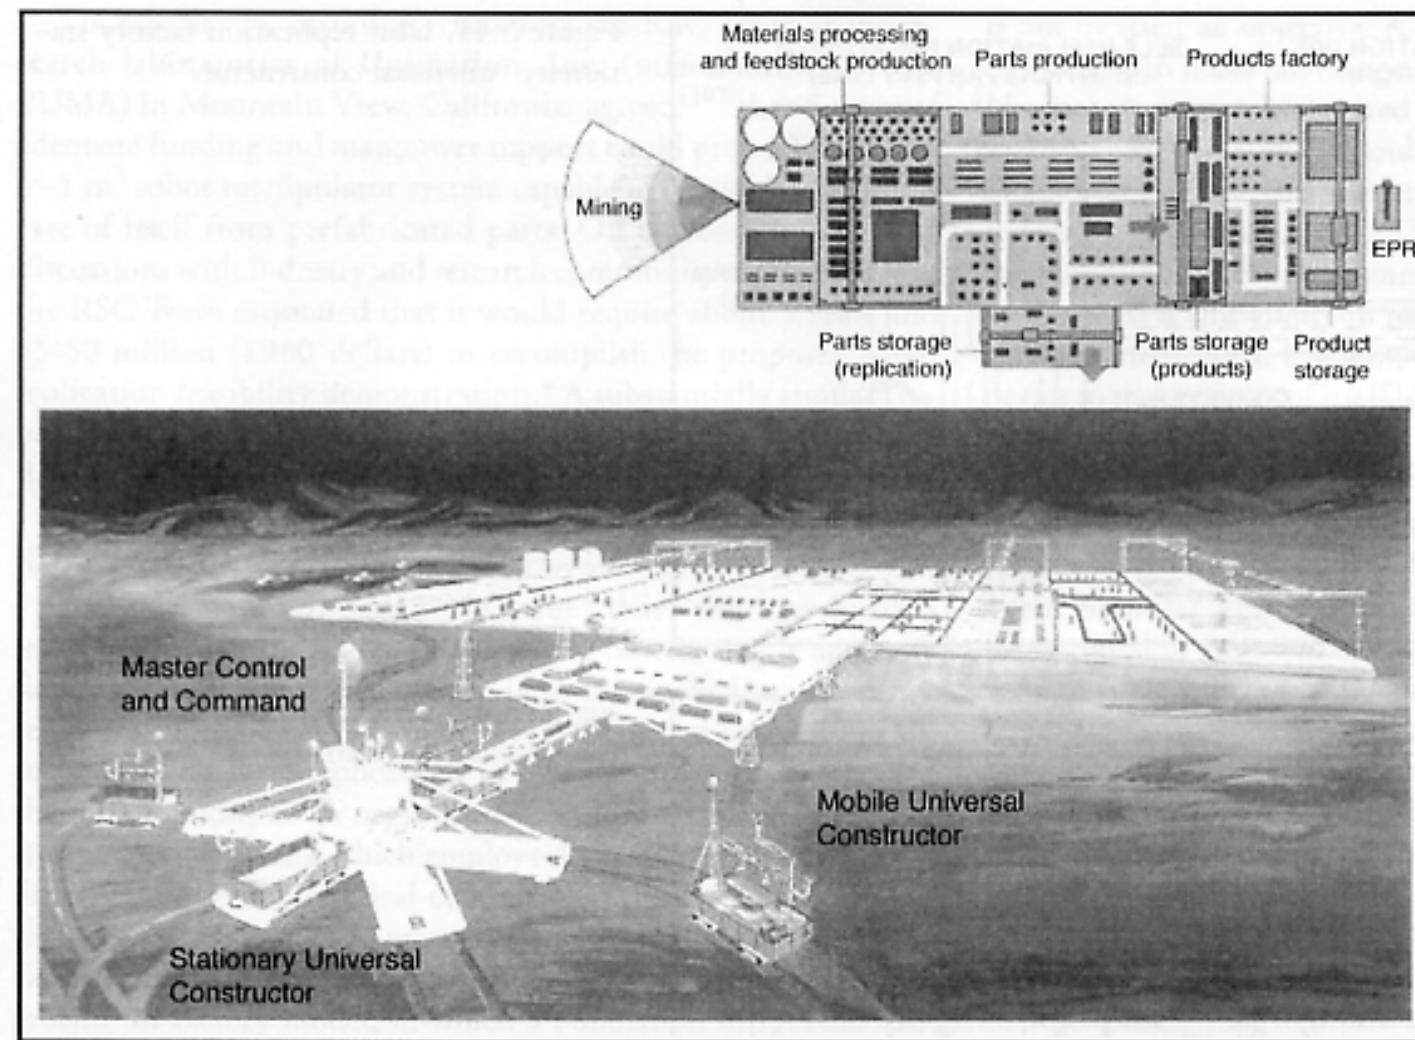

- AI: Kunstig intelligens
- AL: Kunstigt liv
- AI: 1970erne. Troen på intelligente maskiner, top-down, neurale net, ekspertsystemer, lærende systemer, store parallelle supercomputere.
- AL: 1980/90erne. I stedet for at bygge et stort kompliceret system, byg mange små med lokale regler + evolution. Bottom-up tilgang.

John von Neumann

- Ledte efter en "Universal Constructor" i 1940erne.
- "Theory & Organization of Complicated Automata" (1949)
- Han prøvede at finde en hypotetisk maskine, som kunne bygge kopier af sig selv.
- Han fandt den i samarbejde med Stanislav Ulam som en meget kompliceret CA (formaliseret maskine).
